## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-3, drawn to a SiO<sub>x</sub> powder.

Group II, claims 4-8, drawn to a method for producing an SiO<sub>x</sub> powder using a monosilane gas and a gas capable of oxidizing.

Group III, claim 9, drawn to a film made from the powder.

2. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The requirements for a special technical feature is outlined in Annex B of Appendix A1 of the MPEP (Administrative Instructions under the PCT, "Unity of Invention"). Unity exists only when there is a technical relationship among the claimed inventions involving one or more of the same or corresponding claimed technical features. The express "special technical features" is defined as meaning those technical features that define a contribution which each of the inventions, considered as a whole, makes over the prior art."(Rule 13.2). The question of unity of invention has been reconsidered retroactively by the examiner in view of the search performed; a review of Ichikawa, et al. (JP P2001-348656A) makes clear that the claimed compound is not novel over the prior art. Furthermore, this reference appears to demonstrate that the claimed silica does not define a contribution which each of the inventions, considered as a whole, makes over the prior art. Accordingly, the prior art of the record supports restriction of the claimed subject matter in to the groups as mentioned immediately above.

Art Unit: 1709

Groups I-III lack a common special technical feature (i.e. an SiOx powder). Although they all share a common technical characteristic of either containing or making a SiOx powder as claimed in claim 1, this powder is found not to be a feature that makes a contribution over prior art.

The instant application teaches a SiOx powder wherein x is from 0.6-1.8, has a specific surface area of at least 10 m<sup>2</sup>/g and a total content of Na, Fe, Al and Cl of at most 10 ppm.

Ichikawa, et al. teaches an SiOx material where x is between 0.8 and 1.5 and a specific surface area of more than 10 m<sup>2</sup>/g. (See abstract.) Therefore, groups I-III no longer share a special technical feature that is expected to overcome prior art.

3. A telephone call was made to Patricia Warhurst on August 15<sup>th</sup>, 2007 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

Art Unit: 1709

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

#### ***Joint Inventors***

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

#### ***Conclusion***

No claims have been allowed or rejected at this time. All pending claims are subject to a Restriction/Election requirement.
